## Nitrogen Cylinder - New Primary Packaging

Dear Customer,

Our drive for continuous improvement has led Special Springs to develop new packaging for nitrogen cylinders.

### - Benefits

The new primary packaging, features a protective plastic net and transparent heat-shrinkable multilayer film on the entire length of the cylinder. The benefits will include:

- ✓ Less volume and weight of plastic consumed
- ✓ Reduced cost for plastic disposal
- ✓ Instant visibility of the packaged product
- ✓ Complete protection of the product
- ✓ Ability to check the initial force of packaged cylinder

### - Cylinders Involved

The new primary packaging will be applied on all cylinders from **32 to 120 mm** body diameter and for all strokes.

All cylinders outside this 32mm to 120mm body range will continue to use their current packaging.

### - When?

The new primary packaging will be introduced into production **End of April, 2017**.

The new packaging will be used along the existing packaging, until the stock of the existing packing has been depleted.

We are sure that the new primary packaging and the related benefits will be appreciated as a further distinctive feature of the nitrogen cylinders manufactured by Special Springs.

Best regards,  
Jim Glynn
